POWAKADDY TOUCH

POWAKADDY have released arguably the most innovative and exciting trolley ever to hit the market. The Touch is set to revolutionise the way trolleys work with its patented technology that, in basic terms, is a touch-sensitive handle that changes its pace to suit the speed at which its user walks. Most conventional trolleys use buttons or dials to control the speed at which they move, but the Touch is operated from its handle. The more pressure you put on the handle, the quicker the trolley moves. This means that the Touch speeds up and slows down according to how fast you are walking and therefore requires much less effort and time to operate. What is more, it means you are in total control of the trolley and do not feel like you are being dragged around the course by it. But the Touch is not all about this technology and features everything a normal trolley needs for top performance. A quiet yet powerful 200W motor ensures it can navigate even tough terrain, a versatile bag grip keeps your clubs perfectly still, and a simple fold mechanism means it can be easily stowed away in your boot.
